

What are the treatments for kidney failure?

The treatments for kidney failure are

- **hemodialysis**
- **peritoneal dialysis**
- a kidney **transplant**
- conservative management

What is hemodialysis?

Hemodialysis is a treatment for kidney failure that is done in a center several times per week. Some people learn to do hemodialysis in their homes. Hemodialysis uses a machine to filter your blood when your kidneys are too sick to filter any more. With hemodialysis, your blood is filtered outside of your body. Unfiltered blood is removed from the body and flows to the dialyzer to be cleaned. Filtered blood flows back to the body. First, a dialysis nurse places two needles into your arm. A pump on the hemodialysis machine draws your blood through one of the needles into a tube. The tube takes the blood to a filter, called a **dialyzer**. Inside the dialyzer, your blood
